Your proposals

Title	State
Von Null auf root in 120 Minuten - Einführung ins Website Hacking	✔ confirmed
Besser leben mit SSH	✔ confirmed
Moderne Linux Kommandozeilenwerkzeuge - Edition "Allein zu Haus"	✔ confirmed
"EU Digital COVID Certificate" - Keine schwarze Magie	✔ confirmed
Die unterhaltsamsten österreichischen IT Fails der letzten Jahre und was wir daraus lernen können	✔ confirmed

Helft mir !!!

- Reicht Talks und Workshops ein
- Ich helfe gerne
 - Themenfindung
 - CfP Formulierung
 - Präsentation bauen
 - Präsentation Testlauf

Command Line Syntax

If a <newline> follows the <backslash>, the shell shall interpret this as line continuation.

The Open Group Base Specifications Issue 7, 2018 edition; IEEE Std 1003.1-2017 (Revision of IEEE Std 1003.1-2008)

\ Example

Regular

```
$ ls -a -l -t /tmp
```

With Backslash

```
$ ls \  
-a \  
-l \  
-t \  
/tmp
```

Besser leben mit SSH

Factory Reset

```
ssh leyrer@ssh.example.com
```

ssh

leyrer@hziulquoigmnzah.com

ssh_config(5)

1. command-line options
2. user's configuration file (`~/.ssh/config`)
3. system-wide configuration file
(`/etc/ssh/ssh_config`)

~/.ssh/config

Hostname Aliases

Host demo

```
HostName ssh-server.example.com
```

Hostname Aliases

```
Host demo d1 popocatepetl
```

```
HostName ssh-server.example.com
```

Hostname Aliases

```
Host smtp imap www
```

```
HostName %h.example.com
```

No Usernames

Host demo bastion

HostName ssh-server.example.com

User leyrer

```
ssh leyrer@ssh.example.com
```

```
ssh demo
```

No Passwords

SSH Public Key authentication

Asymmetric Cryptography

- **public key**
 - on the SSH server(s)
- **private key**
 - on the PC/Laptop

Client initiates SSH connection

Server sends encrypted challenge statement with matching public key

Client decrypts statement using private key and sends back to be checked

Server verifies and if statement matches, authentication is granted to client

ssh-keygen

```
$ ssh-keygen -t ed25519 \  
-a 420 \  
-f ~/.ssh/demo.ed25519 \  
-C "Dem leyrer sein key (gpn20)"
```

ssh-keygen output

Generating public/private ed25519 key pair.

Enter passphrase (empty for no passphrase):

Enter same passphrase again:

Your identification has been saved in /home/leyrer/.ssh/demo.ed25519

Your public key has been saved in /home/leyrer/.ssh/demo.ed25519.pub

The key fingerprint is:

SHA256:x9IvXWUWA6fNcyY+AqkDwpdCf2LP0HzLEzakF10YQ1Y Dem leyrer sein key (gpn20)

The key's randomart image is:

```
+--[ED25519 256]--+
```

```
| ..+.Eo.  ..+ |  
| o o +.. . = o |  
| + 0 + o  ..+* |  
| * @ + . . *o |  
| * S + . + |  
| . = B o o . |  
| + . o |  
| . . |  
| |
```

```
+-----[SHA256]-----+
```

ssh-keygen output

Generating public/private ed25519 key pair.

Enter passphrase (empty for no passphrase):

Enter same passphrase again:

ssh-keygen Ergebnis

```
/home/leyrer/.ssh/demo.ed25519
```

```
/home/leyrer/.ssh/demo.ed25519.pub
```

demo.ed25519.pub

ssh-ed25519

AAAAC3NzaC1lZDI1NTE5AAAAIKoB03NrfLS8Z

qWXWv9Uwf12B7QiaIMEs6N2F9f7PNIn Dem

leyrer sein key (gpn20)

demo.ed25519

oAiY519qEJAx

Never do this !!!

Asymmetric Cryptography

- **public key**
 - on the SSH server(s)
- **private key**
 - on the PC/Laptop

Public/Private Key

- They are free !!!
- Create one for each server, customer or service you connect to.

ssh-copy-id

```
ssh-copy-id \
```

```
-i ~/.ssh/demo.ed25519.pub \
```

```
demo
```

Manual Copy

- copy content of local
~/ .ssh/demo.ed25519.pub
- paste it into ~/ .ssh/authorized_keys on
servers

Connect

```
ssh \
```

```
-i ~/.ssh/demo.ed25519 \
```

```
demo
```

Private Key - Less Typing

Host demo bastion

PreferredAuthentications publickey

IdentityFile ~/.ssh/demo.ed25519

~/.ssh/config

Host demo bastion

HostName ssh.example.com

User leyrer

PreferredAuthentications publickey

IdentityFile ~/.ssh/demo.ed25519

Connect

ssh demo

Connect

```
ssh demo
```

```
Enter passphrase for key
```

```
' /home/leyrer/.ssh/demo.ed25519' :
```

ssh-agent(1)

- stores unencrypted keys in memory
- communicates via sockets
- GNOME Keyring, Kwallet, ... include ssh-agent functionality

ssh-add(1)

- adds private key identities to ssh-agent
- “-c” ask for permission before use
- “-d” removes key from ssh-agent

Connect without passphrase

```
ssh-add ~/.ssh/demo.ed25519
```

```
ssh demo
```

Passwordless Benefit

Remote auto completion !!!

Keys & Agent @ Windows

- puttygen
- pagent
- putty

ssh-ed25519	SHA256:dvMU6lMT6jTSCX+e7pwspb/YXFP5KYCmuGFrbmcU3y0	eddsa-key-20220511
-------------	--	--------------------

Options controlling SSH authentication

- Display pre-authentication banner (SSH-2 only)
- Bypass authentication entirely (SSH-2 only)
- Disconnect if authentication succeeds trivially

Authentication methods

- Attempt authentication using Pageant
- Attempt TIS or CryptoCard auth (SSH-1)
- Attempt "keyboard-interactive" auth (SSH-2)

Authentication parameters

- Allow agent forwarding
- Allow attempted changes of username in SSH-2

Private key file for authentication:

supersecretlocation\demo.ed25519.ppk

Browse...

About

Help

Open

Cancel

~/.ssh/config Magic

- For each parameter, the first obtained value will be used.
- more host-specific declarations should be given near the beginning of the file
- general defaults at the end

Per Domain

Host *.test.example.com

IdentityFile ~/.ssh/test-id.ed25519

Host unicorn.prod.example.com

IdentityFile ~/.ssh/pinkfluffy-id.ed25519

Host *.prod.example.com

IdentityFile ~/.ssh/prod-id.ed25519

Sane Defaults

Host demo bastion

HostName ssh.example.com

User leyrer

PreferredAuthentications publickey

IdentityFile ~/.ssh/demo.ed25519

...

Host *

IdentitiesOnly yes

UseRoaming no

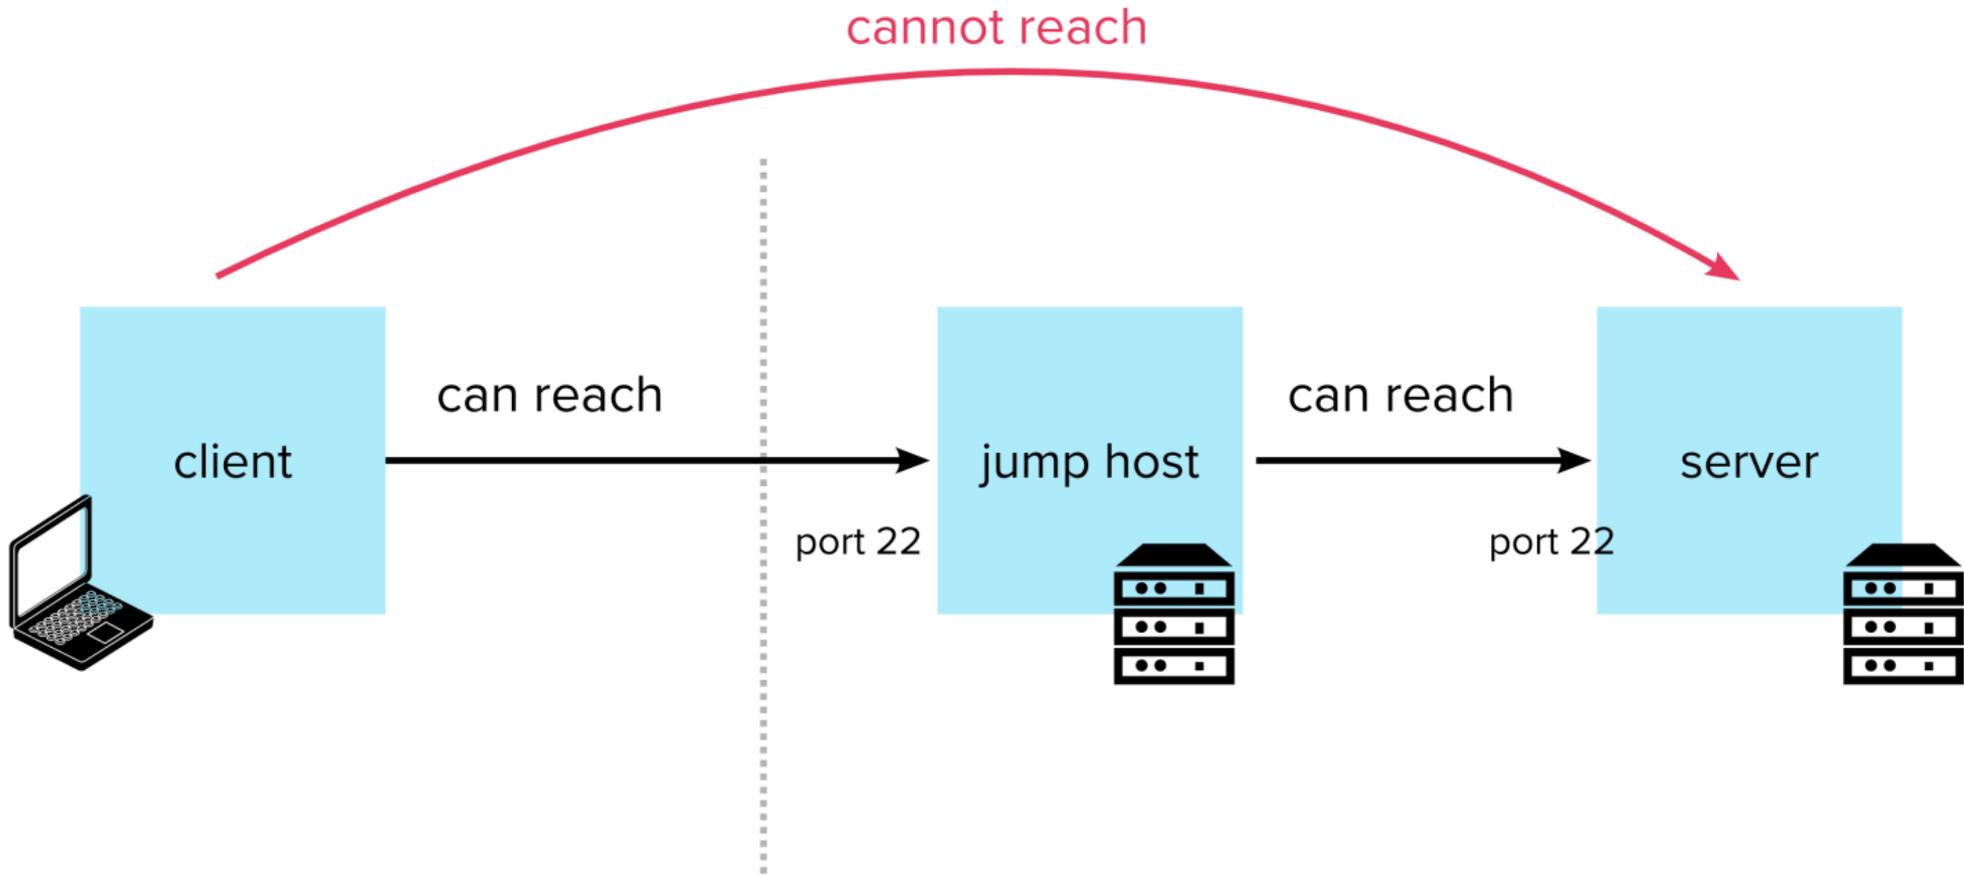

SendEnv LANG LC_*

Compression yes

~/.ssh/conf.d/

- multiple files (eg. one per customer/service)
- same syntax as ssh_config(5)
- sorted by filename

Bastion/Jump Hosts

Manual “Jumping”

```
$ ssh bastion
```

```
Welcome to demo.example.com
```

```
leyrer@demo:~$ ssh target.local
```

```
Welcome to target.local
```

```
leyrer@target:~$
```

Explicit “Jumping”

```
$ ssh -J bastion target.local
```

Elegant “Jumping”

Host demo bastion

HostName ssh.example.com

User leyrer

PreferredAuthentications publickey

IdentityFile ~/.ssh/demo.ed25519

Host internal

HostName target.local

ProxyJump bastion

User leyrer

PreferredAuthentications publickey

IdentityFile ~/.ssh/demo.ed25519

Jump

```
$ ssh internal
```

Jump Fallback

```
ssh \  
  -o ProxyCommand="ssh -W %h:%p bastion" \  
  target.local
```

```
.ssh/config:
```

```
Host internal
```

```
  ProxyCommand ssh -W %h:%p bastion
```

Agent Forwarding

```
ssh -A \  
-o ProxyCommand="ssh -W %h:%p bastion" \  
target.local
```

```
~/.ssh/config:  
Host *  
ForwardAgent yes
```

ssh-audit

- output algorithm information
- output algorithm recommendations
- output security information
- analyze SSH version compatibility

guardian-agent

- more-constrained agent forwarding
- can safely be enabled on any connection
- can be used alongside Mosh or SSH

Traditional agent forwarding

Allow use of key /home/dima/.ssh/id_rsa?

Key fingerprint SHA256:qwLY8d0kKayuxPNR7HDa8M43eIZ65I/
TKJyzVvMICYQ.
